Functionality Assessment of Household Tap Connection under National Jal Jeevan Mission - 2022

Har Ghar Jal
Jal Jeevan Mission

District Report: Arwal, Bihar
Survey Duration: February to April 2022

Contents

Abbreviations

AWC	Aanganwadi Centre
FHTC	Functional Household Tap Connection
GoI	Government of India
GP	Gram Panchayat
HF	Health Facility
HH	Household
HGJ	Har Ghar Jal
JJM	Jal Jeevan Mission
LPCD	Litres per Capita per Day
MVS	Multi-village Scheme
NJJM	National Jal Jeevan Mission
RC	Residual Chlorine
O&M	Operation and Maintenance
OHT	Over Head Tank
PSU	Primary Sampling Unit
PWS	Piped Water Supply
SVS	Single Village Scheme
VAP	Village Action Plan
VWSC	Village Water and Sanitation Committee
WQMIS	Water Quality Monitoring and Information System

Glossary

1. **Community** – Group of people living in one particular area or village/habitation
2. **Cross-sectional research** – A cross-sectional study is a type of research design in which data is collected from a relatively large and diverse group of people at a single point in time
3. **Drinking water source** – Groundwater (open well, borewell, tube well, handpump, spring, etc.)/ surface water (river, lake, pond, reservoir, etc.)/rainwater, available for drinking and domestic use
4. **Improved sources** – The following sources as considered improved by the National Family Health Survey definitions: Piped water into dwelling, yard/plot with a tap, piped water connected to public stand-posts, tube well or borewell, Hand pump, dug well–protected, Spring–protected, Rainwater, Water ATM/ Community RO plant/ Community Water Purification Plant (CWPP)
5. **Unimproved sources** – The following sources as considered unimproved by the National Family Health Survey definitions: Unprotected spring, unprotected dug well, cart with small tank / drum, Tanker/ truck, Surface water (river/ dam/ lake/ pond/ canal), and bottled water
6. **Functional Household Tap Connection (FHTC)** – A tap connection to a rural household for providing drinking water in adequate quantity of prescribed quality on regular basis.
7. **Functionality of FHTC** – Functionality of a tap connection is defined as having infrastructure, i.e., household tap connection providing water in adequate quantity, as presented:

Definitions	Fully-functional	Partially-functional	Non-functional
Quantity	>= 55 LPCD	> 40 lpcd - < 55 LPCD	< 40 LPCD
Regularity	12 months or daily basis	9-12 months or < daily basis	< 9 months or < daily basis
Quality	Potable	Potable	Non potable

8. **Quantity (in litres)** of water received by households per person per day should meet the service level of 55 LPCD
9. **Functionality Assessment** – An assessment of the functionality of rural household tap connections based on a sample survey
10. **Fully Regular –** Regularity of water is considered when a rural household receives water for 12 months on daily basis or as per schedule.
11. **Potability –** Potable water is water that is safe to be used as drinking water. Parameters of potable water are mentioned below:

Parameters for potable water tested in the survey	Unit	Acceptable Limit	Permissible Limit in the absence of alternative sources
i. pH (tested on site)	-	6.5 to 8.5	No relaxation
ii. Free residual chlorine (tested on site)	Mg/litre	0.2	1
iii. Turbidity	NTU	1	5
iv. Total hardness	Mg/litre	200	600
v. Total alkalinity	Mg/litre	200	600
vi. Chloride	Mg/litre	250	1,000
vii. Ammonia	Mg/litre	0.5	No relaxation
viii. Phosphate	Mg/litre	0.3	1
ix. Iron (in hotspots only)	Mg/litre	1	No relaxation
x. Nitrate	Mg/litre	45	No relaxation
xi. Sulphate	Mg/litre	200	400
xii. Total dissolved solids	Mg/litre	500	2,000
xiii. Fluoride	Mg/litre	1	1.5

xiv.	Arsenic (in hotspots only)	Mg/litre	0.01	No relaxation
xv.	Bacteriological test for Total coliform bacteria and E. coli or thermotolerant coliform bacteria	Shall not be detectable in any 100 ml sample		

12. **Sampling** – Selection of a subset of individuals from within a statistical population to estimate water service delivery among the population. In the current study, households have been sampled to estimate the representation of the village and subsequently of the district as well as of the state.

13. **Types of schemes**: Following are the piped water supply schemes that were assessed
    a. Mini-solar based piped water supply scheme in isolated/tribal hamlets
    b. Single Village Scheme (SVS) in villages having adequate groundwater that needs treatment
    c. Single village scheme (having adequate groundwater/ spring water/ local or surface water source of prescribed Quality)
    d. Retrofitting of ongoing schemes taken up under erstwhile NRDWP for the last mile connectivity/ retrofitting of completed rural water supply schemes to make it JJM compliant
    e. Multi-village PWS scheme - with water grids/ regional water supply schemes

14. **Village Action Plan (VAP)** – Plan prepared by Gram Panchayat and/ or its sub-committee, i.e., VWSC/ Paani Samiti/ User Group, etc. based on baseline survey, resource mapping and felt needs of the village community to provide FHTC to every rural household, treat the generated greywater and plan its reuse, undertake surveillance activities, etc. VAP also indicates the fund requirement and timelines for completion of work under the Mission and will be approved by the Gram Sabha. Irrespective of the source of funding, all drinking water-related works in the village are taken up based on the VAP.

15. **Source Sustainability** – includes measures such as aquifer recharge, rainwater harvesting, increased storage capacity of water bodies, reservoirs, de-silting, etc. improve the lifespan of water supply systems

16. **Har Ghar Jal (HGJ)** – An administrative unit wherein all HHs are provided with water supply through FHTCs is called "Har Ghar Jal".

17. **Public Institutions** – The public institutions in the survey include Aanganwadi Centre (AWC), Health Facilities, Schools, Gram Panchayat, and government buildings.

18. **Working tap connection –** A tap connection supplied water at least one day in the week, preceding of survey

19. **Functional Scheme –** A scheme is said to be functional if it was reported to be working for all 12 months in a year.

1. Factsheet

Table 1: District level factsheet

Indicators	Bihar	Arwal
Functionality status of FHTC at households		
Households (HHs) which received water through FHTC at least once in last 7 days (%)	89	55
Fully functional (%)	78	74
Partially functional (%)	20	22
Non-functional (%)	2	4
Quantity of water received by households		
Adequate quantity (>55 LPCD) (%)	97	93
Partially adequate quantity (> 40 LPCD - < 55 LPCD) (%)	1	3
Inadequate quantity (<40 LPCD) (%)	2	4
Regularity of water received by households		
Fully Regular Supply (as per schedule) (%)	84	78
Partially Regular Supply (not as per schedule) (%)	9	11
Irregular Supply (less than 9 months' supply) (%)	7	11
Potable (Quality) water received by households		
Potable (%)	94	99
Non-potable (%)	6	1
Residual Chlorine (RCL) detected with in permissible limits (%)	5	1

Household level indicators		
Households receiving water supply daily-7 days a week (%)	97	84
Daily HH requirement of water being met by FHTC (%)	73	47
Households reported FHTC as a primary source of drinking water (%)	59	31
Households purifying water before drinking (%)	11	8
Households paying water service delivery charges (%)	6	7
Households having coping mechanisms during scarcity (%)	14	22
Households aware of grievance redressal mechanism for reporting problems with FHTC (%)	65	51
Households reported incidence of water-borne diseases in the last year (%)	0	1
Households reported a reduction in time and effort in collecting water (%)	86	31
Overall user satisfaction at the household level		
Regularity (%)	89	69
Overall quality (%)	88	68

Indicators	Bihar	Arwal
Village level indicators (based on village questionnaire)		
Schemes reported to be functional (%)	38	40
Villages with groundwater resource (%)	26	6
Villages having groundwater recharge structure[1] (%)	9	0
Water supply and storage status in villages		
Average no. of times water is supplied in a day	2	2
Villages having OHT/ Sump for storage of water (%)	80	41
Water quality monitoring and surveillance in the villages		
Villages with Field Test Kits (%)	13	6
Villages in which bacteriological test was done in last 1 year by VWSC/ Pani Samiti (%)	21	0
Villages reported to have a mechanism for chlorination (%)	26	0
VWSC/Pani Samiti and PWS signage in villages		
Village reported having presence of VWSC/ Pani Samiti (%)	23	3
Villages in which VWSC/ Pani Samiti is responsible for Operation & Maintenance of PWS schemes (%)	7	0
Villages in which persons are trained to use Field Test Kits (%)	14	3
Villages in which signages about JJM were observed (%)	30	0
Operation and maintenance at village		
Villages levying water service delivery to households (%)	5	3
Convergence of JJM activities with other schemes in the villages (%)	3	0
Villages having skilled manpower for Operation & Maintenance of PWS schemes (%)	31	0
Community monitoring of water wastage in villages (%)	11	0

---

[1] Out of villages who reported to have groundwater source (N$_v$=2)

2. Context

Jal Jeevan Mission (JJM) was launched on the 15th of August 2019 with the objective to provide functional household tap connections (FHTCs) to all rural households.

Figure 1: Har Ghar Jal - Objective, Vision, & Outcome

In accordance with the overall objectives as specified in the Operational Guidelines for the implementation of the NJJM, GoI carried out a sample survey to assess the functionality of household tap connections. As part of this endeavour, NJJM, GoI engaged HTA Kantar Public to conduct the 'Functionality Assessment' of the household as well as public institution/ buildings such as schools, anganwadis, gram panchayat buildings, public health facilities, and wellness centers in all the rural districts for the fiscal year 2021-22.

2.1. District snapshot: Arwal

District Arwal of Bihar has a population of 7,78,440. The district has 5 blocks. Out of 339 villages in the district, 27 are SC dominated and 1 are ST dominated villages. The district lies in Lower Gangetic Plains Region and receives an annual rainfall of 722.6mm.

Presented here are district level information collated from the DDWS-IMIS:

Figure 1: District IMIS Status & Map

IMIS status:

- – 337 (99% of all) villages are Har Ghar Jal
- – 2 (1% of all) villages are non-Har ghar Jal
- – Non-SC/ST dominated district
- – Non-JE/AES
- – No- History of water contamination
- – 337 (99% of all) villages with PWS more than 20 FHTC
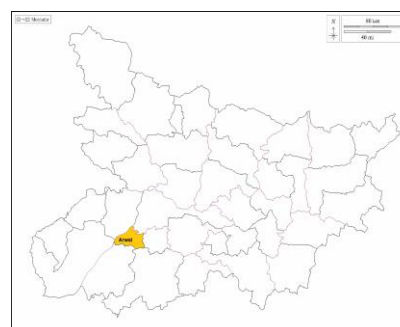

2.2. FHTC Assessment Objectives

Figure 3: Objectives of Functionality of Tap Connections

Functionality assessment of household tap connections/ public institution buildings for each rural district in all states of India

Assessment of source sustainability

Ascertain, in the form of data, on-ground progress of JJM in terms of adequate quantity of prescribed quality of drinking water supplied to rural HHs & public institutions on a regular basis

To compare the status/ progress of FHTCs in States/ UTs on various parameters with proper justification

To engage with Gram Panchayats or its sub-committees in the districts and solicit their feedbacks and recommendations for improving the programme implementation

To suggest measures for mid-course correction for improvement in functionality of household tap connections

Assessment of planning of Grey Water Management, Rainwater Harvesting, Ground Water Recharge, Source Strengthening & O&M provisions in VAP and its implementation

2.3. Assessment Methodology

A cross-section research design has been used for this functionality assessment study. Quantitative data were collected from villages and households across all states/UTs using the CAPI (Computer Assisted Personal Interviewing) mode. The survey includes two components, village, and household.

Figure 4: Survey Components & Respondents

Respondents Interviewed

Members of Village Water and Sanitation Committee (VWSC)/ Pani Samiti or other sub-committees of the Gram Panchayat responsible for the implementation of PWS, wherever available

Or,
Pump / Source operator

Or,
Representatives from village institutions (schools, AWCs, health centres)

Assessment of FHTC Survey

Har Ghar Jal
Jal Jeevan Mission

Village Survey
- VWSC Questionnaire
- Water sample collection for lab tests from public institutions & village water source

Household Survey
- HH Questionnaire
- Water sample collection from HH for onsite and lab test on quality parameter and quantity measurement

The household member is above 18 years old, preferably female.

2.4. Sample Size

The sample size was calculated to provide estimates with a 95% confidence interval (CI) and 5% margin of error (MoE) after incorporating the correction factor for a finite population considering the total number of geographic units having FHTCs.
- Village sample is estimated to be representative at the state level
- HH sample estimated to be representative at the district level

- Number of Har Ghar Jal (HGJ) villages were proportionately sampled at the district level
- All PWS schemes (up to 4) were covered per village. Per scheme approximately 9 (3 each from the head, middle, and tail HHs) or 18 households (6 each from head, middle, and tail HHs) were sampled to achieve the desired sample at the district level.

2.5. Sampling Methodology

As per the design, all villages having a PWS scheme with 20 or more functional household tap connections were included in the sample frame. The probability proportionate to size (PPS) method was used for village selection in each district. The steps for random selection of villages using PPS are as presented:

Figure 5: Steps for Village Sampling

| **1** Sample interval was estimated for each district | **2** Random number was generated for each district | **3** Required number of villages were sampled from each district frame | **4** Har Ghar villages were proportionately represented |

The key considerations for the village and household sampling were:

Figure 2: Sampling Considerations – Village & Households

District

District HH coverage was adjusted at the district level for purposes of representation

Village Survey

Village sample coverage was estimated based on the number of schemes present

20% buffer sampling was done from the frames after removing the sampled villages (for replacement purposes)

HH Survey

HH sample was decided (whether 9 or 18) based on the number of schemes to ensure the district-level sample size is met

A village layout map was prepared to – identify different habitation – reach of the PWS scheme – distribution of pipelines – location of public institutions – and other water supply facilities such as service reservoirs, etc.

In the case of multiple branches of the pipeline, the longest branch was considered.

HHs within 100 meters of the source/ pump/ overhead tank (OHT) was considered a **head-end cluster**

HHs at the mid-point were considered a **mid-cluster**.

HHs at the end of the pipeline were considered **the tail-end cluster**.

For the MVS scheme, the delivery point of the water supply in the village was treated as the source/ head point, while the exit end of the village was considered as the tail end.

For each PWS in a village, 9 or 18 HHs (3 or 6 each from Head, Middle, and Tail-end) were selected depending upon the sample required at the district/state level

At each of these clusters, the required no. of households was sampled keeping the interval maximum up to 5 households.

If the selected villages had 2 or more sampled schemes, the no. of households sampled increased at a multiplier of 9 or 18.

If a selected village had 2 or more sampled schemes but was later found to have fewer functional schemes, then the required no. of households for the functional scheme was increased to meet the sample size required.

The record of all district-wise village replacements is maintained and reported as part of the annexure.

2.6. Methodology for Water Quantity Measurement at Households

Figure 7: Steps for Measuring Flowrate from Supply-tap at HHs

Start water flow	Measure flow of water	Record response
Timer to be started simultaneously while placing the container under the fully running tap. Water is allowed to flow for 1 full minute or till the container fills.	After closing the tap, the assessor notes down the amount of water collected in the bucket using the measuring cup – and notes the total seconds (maximum up to 60 seconds) the tap was running.	Records the volume of water collected in 1 minute

The flow rate of the water supply was measured using a container with gradual markings (either 5 litres or 1 litre, based on the flow of the tap) and a stopwatch/timer-watch. The process followed is as described in Figure 7.

In the case of households where the FHTC is connected directly with the storage tank, the following steps were adopted to measure the quantity:

- Assessor first asked and recorded length, breadth, and height.
- Assessor dipped a 5 feet long rod, marked the level of the water table, and calculated the volume – length x breadth x-height of water.
- Next the assessor opened the valve of the connection and allowed the water to flow inside the storage for 10 minutes.
- After 10 mins, the valve was closed, and the assessor again dipped the rod and recorded the new height of the water inside the tank. Based on this new 'height' and the CAPI calculated the changed volume.
- The difference in the volume of water in 10 minutes divided by 10 provided the flow rate of the water supply per minute.

The water flow rate was not measured for village-level public institutions.

2.7. Methodology for Water Quality Measurement

Water quality was tested for all public institutions available in the villages, including schools, anganwadis, gram panchayat buildings, public health facilities, and wellness centers, and at the selected households. Two types of quality tests were carried out – a) spot test for pH and free residual chlorine, and b) water sample was collected and transported to labs for testing against 13 quality parameters (total 15) as specified in Figure 8.

Figure 8: On-site & Laboratory Based Quality Test

JJM, with the support of the BMI Division of ICMR, enabled a new interface on the WQMIS portal for "Functionality Assessment (FA) User" to enable seamless harmonization of water sample registration, sample submission for testing, and sharing of results as per the applicable quality parameters.

2.8.   Project implementation

An overview of the project implementation is as presented:

Figure 9: Broad project implementation framework

A total of 15 teams (comprising 15 supervisors, 90 assessors, and 15 water collection assistants) were recruited, trained, and deployed to complete the survey across the states of Bihar. One survey team covered approximately 2 – 3 districts. The state-wise team deployment and fieldwork dates were as presented:

Table No. 1: State-wise team deployment and data collection start & end dates				
State	**Teams deployed**	**Start date**	**End date**	**Total data collection days**
Bihar	15 Teams	02-18-2022	04-02-2022	42 days

A four-tier quality control (QC) system was put in place. At the ground level, the data collection exercise was done using a computer-aided Personal Interview (CAPI) application which contained all logic and skip-checks inbuilt. Also, 5% of the total samples were accompanied by the supervisors. Sub-targeted QC was done by the state field managers (5%) and the central project management team (5%). Apart from this, the central research team monitored the data trend and as per requirement debriefed data collection teams to improve quality.

2.9. Sample coverage

Table No. 2: Sample covered					
	Targeted sample		Achieved sample		
District	Village	HH	Village	HH	Public Institutions
Arwal	**32**	**495**	**32**	**497**	**11**
Bihar	**812**	**16,308**	**812**	**16,404**	**318**

2.10. Sampled village and household profile

SAMPLED VILLAGES	SAMPLED HOUSEHOLDS
• Total no. of villages covered in the district **–** 32 • Percentage of SC dominated villages covered in the district is 0% (which is lower than the state average, i.e., 11%) • Percentage of ST dominated villages covered in the district is 0% (which is lower than the state average, i.e., 2%) • Higher proportion of **pump operator** interviewed at the village level • **No,** the district reported to have any historical incidence of water contamination	• Total no. of households covered in the district **– 274** • Proportion of General - 19%, SC 22%, ST% 2, OBC 58% households • **34%** of the FHTC connections are under the name of a female member • Average household size **– 7** • **>75%** positive user experience in 0/5 measures

3. Findings

3.1. Functionality status of FHTC at household level

A. Functionality – Working tap connection vs 55 LPCD vs regularity vs potability

Figure 3: Functionality of HH tap connection

* Fully Functional has been computed as = Adequate Quantity ∩ Fully Regularity Supply ∩ Potable (Quality)
It has been found that 55 percent of the sampled HHs (N=274) had working tap connections (i.e., received water at least once in last 7 days). More than 2 out of 10 (74 percent) HHs had fully functional tap connection (i.e., HHs receiving adequate quantity of prescribed quality of water on a regular basis).

3.2. Quantity, Regularity, and Quality of Water

Under JJM, functionality is defined as having infrastructure, i.e., household tap connection providing water in adequate quantity (55 LPCD or more) of prescribed quality on regular basis (every day or as decided by GP and/ or its sub-committee) with adequate pressure. It will also include long-term source and system sustainability. Presented here are the findings in this respect.

A. Water quantity measured as LPCD (Litres per Capita per Day)

93% HHs reported receiving adequate quantity of water

Figure 4: Quantity of water received by households

- Adequate quantity
- Partially adequate quantity
- Inadequate quantity

C. Water quality – Potability

Figure 7: Potable water received by households

■ Potable* ■ Not Potable

N_h=274
*Potable water has been considered basis testing of water samples through laboratory tests for physical, chemical, and bacteriological as given in Table 4 parameters (within acceptable/ permissible range) and onsite testing of pH. The details of laboratory test are mentioned in the table given above in the glossary.

Table No. 3: Village quality parameters reported within permissible range (% sample within permissible range)

| Quality Parameters (NV=32) | Water Samples Tested from Public Institutes | | | |
	Anganwadi Centre	Health Facility	Schools	Others
pH (on-site)	100		100	100
Turbidity	100		100	100
Total Hardness	100		100	100

Total Dissolved Solids	266	100
Bacteriological Test (Presence/Absence)	Not tested	
Fluoride	No history	
Arsenic	No history	

Safeguarding piped water supply for unforeseen bacteriological contamination- Presence of Residual Chlorine (RC)

The Residual Chlorine (RC) in the Arwal district was found in 1% samples. Out of which 0% samples were having RC outside range whereas 99% samples, had no RC.

The Residual Chlorine in piped water supply is one of the most important preventive actions to assure quality of water against bacteriological contamination from source to consumption. The presence of residual chlorine within permissible limits is indicator of well-maintained and healthy piped water supply system.

It is advised that behavioural change communication campaigns on appropriate dosage of residual chlorine is held in all villages and monitoring system for chlorine dosing is established. The FTK must have residual chlorine testing facility for effective WQM&S.
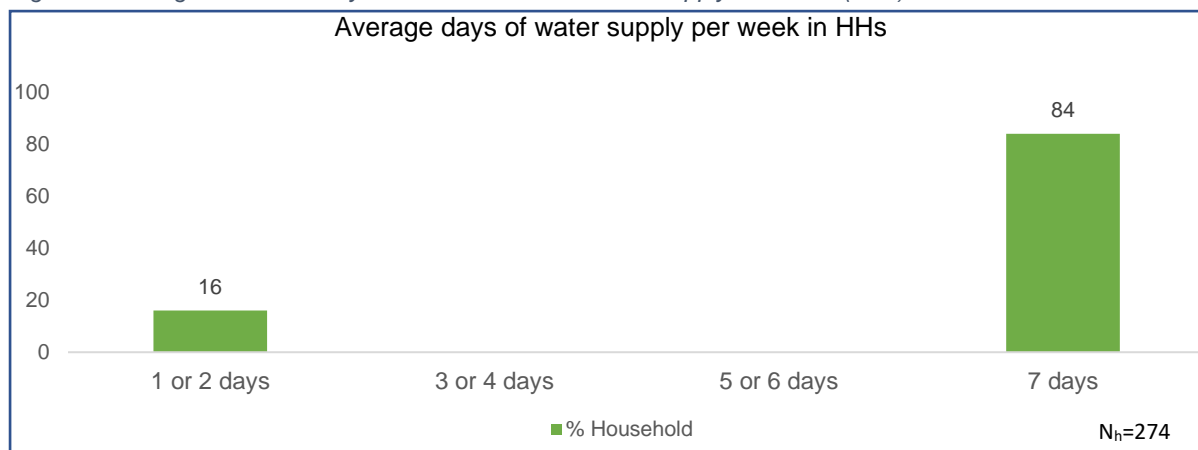

Comment on functioning of District Lab:

The district lab tested water samples for 6 water quality parameters. 285 water samples were submitted, and 275 water samples were tested, and reports made available. The turnaround time for testing was more than 48 hours in most cases.

The labs did not have capacity to test more than 40 number of samples and had issues of human resource, regents etc

3.3. Average water supply days in a week

*Figure 8: Average number of days households receive water supply in a week (in %)*

Average days of water supply per week in HHs

4.2. Functionality – 55 LPCD vs regularity vs potability vs working tap connection

Table No. 7:	Functionality of HH tap connection				
S. No.	Village	Fully Functional* (% HH)	Adequate Quantity (% HH)	Fully Regular Supply (% HH)	Potable (Quality) (% HH)	Working tap connections (%HH)
1	Total	73	93	77	98	100
2	Ibrahimpur	56	100	56	100	100
3	Pinjranwan	73	100	82	91	100
4	Dhondar	100	100	100	100	100
5	Bara	100	100	100	100	100
6	Rajepur	100	100	100	100	100
7	Anuan	20	100	20	100	100
8	Dharampur	0	100	0	100	100
9	Khatangi	73	100	73	100	100
10	Kutubpur Tera	44	67	67	100	100

11	Chauhar	94	100	100	94	100
12	Kochahsa	0	11	0	100	100
13	Rampurchae	0	0	80	80	100
14	Shahar Telpa	50	83	50	100	100
15	Karpi	70	100	74	96	100
16	Kasauti	50	100	50	100	100
17	Aiyara	83	100	83	100	100
18	Masuda	70	70	90	100	100
19	Agnur	82	100	82	100	100
20	Jaipur	78	100	89	89	100
21	Teri	89	100	89	100	100
22	Feinku Bigha	0	100	0	100	100
23	Nasirpur Sarwar	67	100	67	100	100
24	Sarauti	85	100	85	100	100
25	Etawan	89	100	89	100	100
26	Fatepur Sanda	100	100	100	100	100
27	Makhmilpur	100	100	100	100	100

* Fully Functional has been computed as = Adequate Quantity ∩ Fully Regularity Supply ∩ Potable (Quality)

4.3.   Villages not meeting the quality parameters

Table No. 8:		Table Quality parameters dissatisfied at village level		
1. pH (Acceptable Range- 6.5 to 8.5)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**No. of HHs outside the acceptable range**
1	Kaler	Jaipur	Jaipur	1
2	Kurtha	Pinjrawa	Pinjranwan	1

2. Free residual chlorine (Acceptable Range- 0.2 to 1 PPM)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**	**HHs with no chlorine**
1	Arwal	Abgila	Etawan	0	9
2		Bhadasi	Feinku Bigha	0	6
3		Khabhaini	Nasirpur Sarwar	0	9
4		Rampur Vaina	Fatepur Sanda	0	9
5		Sarauti	Sarauti	0	13
6	Kaler	Jaipur	Jaipur	0	8
7		Kaler South	Agnur	0	17
8		Sakrikhurd	Masuda	0	10
9		Teri	Teri	0	9
10	Karpi	Aiyara	Aiyara	0	12
11		Bambhai	Kasauti	0	6
12		Chouhar	Chauhar	0	18
13		Durra	Kutubpur Tera	0	9
14		Karpi	Karpi	0	23
15		Kochhasa	Kochahsa	0	9
16		Rampur Chai	Rampurchae	0	5
17		Shahartelpa	Shahar Telpa	0	6
18	Kurtha	Bara	Bara	0	17
19		Ibrahim Pur	Ibrahimpur	0	9
20		Kodmarai	Dhondar	0	10
21		Manik Pur	Rajepur	0	9
22		Pinjrawa	Pinjranwan	0	11
23	Sonbhadra Banshi	Anuaa	Anuan	0	5
24		Chamandi	Dharampur	0	4
25		Khatangi	Khatangi	0	11
26		Sher Pur	Makhmilpur	0	18
3. Turbidity (Acceptable Range- 1 to 5 NTU)				

Table No. 8:	Table Quality parameters dissatisfied at village level			
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
4. Total hardness (Acceptable Range- 200 to 600 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
5. Total alkalinity (Acceptable Range- 200 to 600 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
6. Chloride (Acceptable Range- 250 to 1000 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
7. Ammonia (Acceptable Range- 0.5 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
8. Iron (Acceptable Range- 1 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
1	Karpi	Chouhar	Chauhar	1
9. Nitrate (Acceptable Range- 1 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
10. Sulphate (Acceptable Range- 200 to 400 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
1	Karpi	Rampur Chai	Rampurchae	1
11. Total dissolved solids (Acceptable Range- 500 to 2000 Milligram/litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
12. Bacteriological test (Presence)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
13. Fluoride (Acceptable Range- 1 to 1.5 Milligram /litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
1	Karpi	Karpi	Karpi	1
14. Arsenic (in hotspots) (Acceptable Range- 0.01 Milligram /litre)				
S.No.	**Block Name**	**Panchayat Name**	**Villages**	**HHs outside the acceptable/permissible range**
NA	NA	NA	NA	NA
