Annexure 4: Indicative proportion of functional tap connections by districts	12
Annexure 5: List of villages where samples failed for given quality parameter	13

1. Introduction

Announced in 2019, the Jal Jeevan Mission – Har Ghar Jal (JJM – HGJ) is implemented by Department of Drinking Water and Sanitation (DDWS), Ministry of Jal Shakti in partnership with States/ UTs. JJM aims to provide a Functional Household Tap Connection (FHTC) to every rural home in the country by 2024. A household tap connection is said to be functional when the tap water supply is of adequate quantity (minimum 55 lpcd) and prescribed quality (as per BIS:10500) on regular and long-term basis. Further, JJM seeks to promote holistic management of local water sources and not just provide tap water connections.

The DDWS had engaged Nielsen (India) Private Limited to undertake 'Functionality Assessment' of household tap connections. The assessment covered household tap connections in 6,992 villages across 704 districts from 31 States/ UTs. The survey was undertaken in November – December 2020.

2. Objectives of the study

The main objectives were an assessment of Functionality of Household Tap Connections (FHTCs) under JJM on various parameters; ascertaining, in the form of data, on-ground progress of JJM in terms of adequate quantity of prescribed quality of drinking water supplied to rural households on regular basis; and engaging with Gram Panchayats and/ or its sub-committees of the sample villages and soliciting their feedbacks and recommendations for improving the programme implementation; and to suggest measures for mid-course correction for improvement in functionality of household tap connections.

3. Approach and Methodology

The approach followed was to assess the functionality of household tap connections (within premises) and in-village drinking water supply infrastructure. The selection of sample villages was from the JJM-Integrated Management Information System (IMIS) data-base of villages having at least 15 household tap connections. In each sample village, the largest PWS scheme was sampled. The survey was planned as in-person Computer Aided Personal Interview (CAPI) survey, and included an on-ground assessment of the functionality of sample PWS schemes and tap connections attached to the same. The survey included measurement of the quantity of water received at the household level through the tap connection, as well as water testing to check whether the quality of the drinking water is as per the BIS standards, using Field Test Kits (FTKs) and H₂S vials. The study also collected supply side information, including assessment of the quantity of water supplied by the scheme, operation and maintenance arrangements, availability and functionality of scheme level infrastructure and the aspects related to source and system sustainability.

A sample of 10 villages from every district in the State were selected following probability proportionate to size (PPS) systematic random sampling method ensuring due representation of SC/ SC majority villages as well as quality-affected villages. In each selected village, households for the survey were selected at head end, middle and tail end of the selected piped water supply network. In Karnataka the survey was conducted in 4233 households from 300 villages in 30 districts.

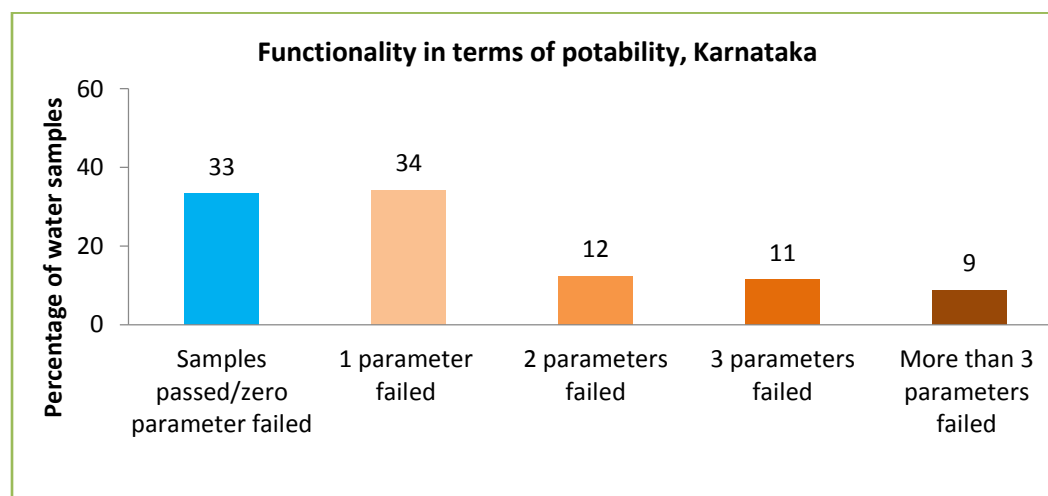

4. Key Findings

SL.	INDICATOR	Karnataka	India
Household level			
1	Average household size	5.3	5.6
2	Percent of households using FHTC for drinking purpose	83.8	88.9
3	Percentage of households reported working tap connections (supply at least one day in last 7 days)	97.7	93.6
4	Number of water supply days in a usual week		
4a	1 – 2 days	8.9	7.6
4b	3 – 4 days	16.9	10.4
4c	5 – 6 days	0.9	1.5
4d	7 days	73.4	80.5
5	Number of water supply days in the last week		
5a	0 days	0.9	2.4
5b	1 – 2 days	10.2	9.7
5c	3 – 4 days	22.5	14.8
5d	5 – 6 days	2.1	4.9
5e	7 days	64.3	68.1
6	Percentage of households reporting reliability of water supply days	94.8	86.5
7	Percentage of households reporting tap connections functioning continuously for more than 15 days in a month for last 12 months	94.1	84.6
8	Average number of times water is supplied on the days of supply		
8a	1 time	97.0	56.6
8b	2 times	2.9	28.2
8c	3 times	0.0	6.1
8d	4 times/24 hours	0.1	9.1
9	Percentage of households reporting reliability of supply for different supply timings	93.0	84.3
10	Percentage of households reporting adequate water pressure for different supply timings		
10a	Morning	84.6	80.1
10b	Afternoon	61.2	84.6
10c	Evening	82.1	84.8
11	Percentage of households reported paying water tariff – separately or along with other taxes	94.5	52.8
12	Percentage of households reported receiving 55 lpcd or more	85.4	83.5
13	Percentage of households having potable water *	33.3	61.3
14	Percentage of households reporting regularity of supply	89.4	87.2
15	Percentage of households reporting functional tap connections	27.0	47.8
Village level			
16	Percentage villages having functional water and sanitation committees	23.3	48.5
17	Percentage of functional schemes in the sample villages considering all schemes (supplying water any day in the last 7 days)	95.1	86.0
18	Percentage of in-village schemes having O&M undertaken by village water	92.5	83.1

SL.	INDICATOR	Karnataka	India
	and sanitation committee or by Panchayat		
19	Percentage of sample schemes reported having faced challenges in the last one year		
19a	Inadequate infrastructure	26.5	40.2
19b	Poor water availability at the source	46.3	33.0
19c	Poor maintenance	31.5	46.2
19d	Natural calamity	64.8	63.4
20	Percentage of schemes reporting measure to improve source sustainability	75.6	59.9
21	Number of sample villages found with no scheme (defunct/under construction/not handed over/not constructed)	2	751

Figures 1, 2 and 3 depicts the functionality aspects of the household tap connections in Karnataka. Figure 1 presents the details of the potability aspects – the proportion of samples which have qualified as per all 13-15 parameters, as well as the proportion of sample which have failed due to one/two/three/more than three parameters.

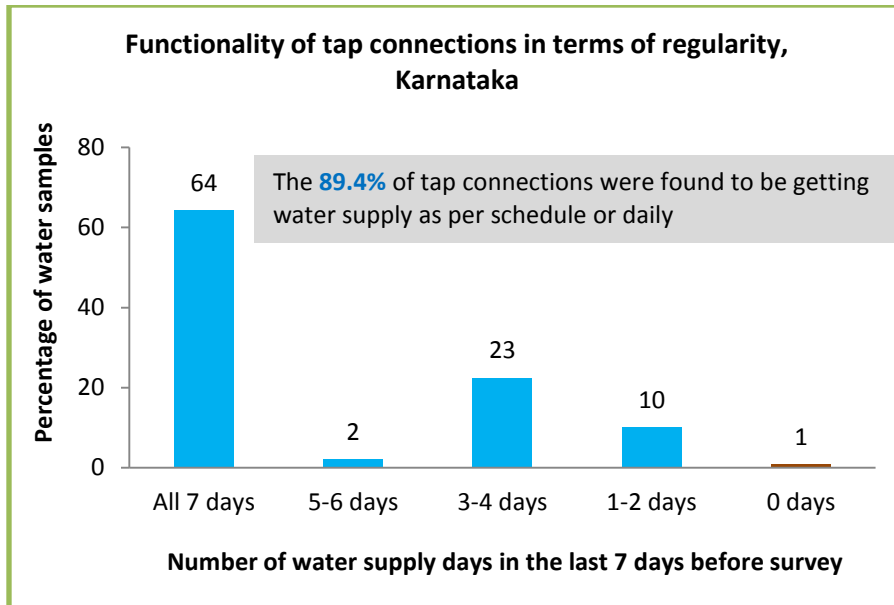

Fig 1: Functionality of the household tap connection in terms of potability - Karnataka

Base: Households with water quality testing done, N: 333

Figure 2 presents functionality in terms of regularity, and presents the water supply situation in the last 7 days (before survey date). This includes information on the proportion of taps supplying water on all 7 days, 5-6 days, 3-4 days, 1-2 days and zero days in the last 7 days. As not all schemes are planned to supply water daily, the information of the proportion of taps supplying water daily or as per the water supply schedule is also presented.

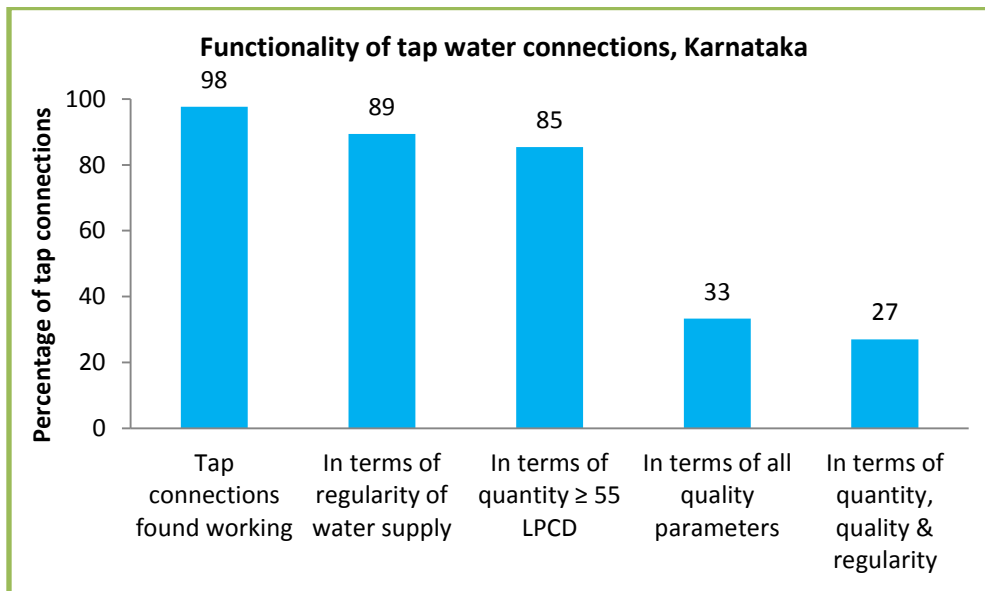

Fig 2: Functionality of the household tap connection in terms of regularity - Karnataka

Base: All Households, N: 4233

Figure 3, presents the summary situation of the working tap connections (defined as supplying water atleast on one day in the last 7 days), the functionality in terms of the proportion of tap connections which have qualified regularity, quantity, quality parameters, and the proportion which have qualified all 3 parameters.

Fig 3: Overall functionality of the household tap connection - Karnataka

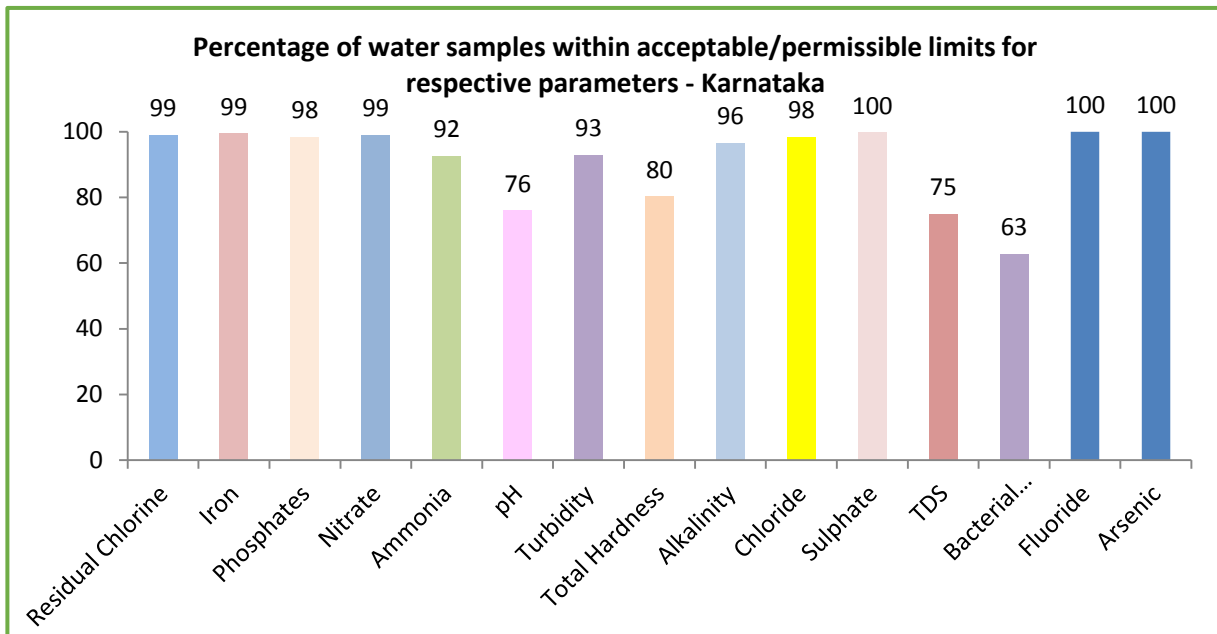

Base: Total count of tap connections considered for functionality assessment, N: 4179

A total of 333 water samples were tested as per BIS: 10,500 standards for all 13 parameters. Additionally 1 sample was tested for fluoride in the fluoride affected village, and 2 samples were tested for arsenic in

arsenic affected villages. The figure below shows the proportion of samples in which different parameters were found within acceptable/permissible limits.

As can be seen, almost all the samples (96% or more) had Residual Chlorine, Iron, Phosphates, Nitrate, Chloride, Sulphate and Alkalinity within acceptable/permissible limits. Fluoride and Arsenic samples were within acceptable/permissible limits. The key water quality issues were Bacteriological presence (total coliform) in 37 percent of the water samples, TDS and pH in almost a fourth of the samples, and total hardness in a fifth of the samples. Moreover, 7 – 8 percent of the samples were found to have Ammonia and Turbidity beyond acceptable/permissible limits.

Fig 4: Percentage of water samples within acceptable/permissible limits for respective parameters - Karnataka

Pic 1: Household survey being undertaken in one of the villages in Karnataka

Pic 2: Water quality sample testing being undertaken in a village in Karnataka

5. Conclusions

Karnataka has only 27 percent functional tap connections and this is low as compared with the national average. A high proportion (85.4%) of tap connections are estimated to supply more than 55 lpcd or more water and about 89 percent of tap connections were found to be supplying water daily or as per schedule. However, the proportion of taps being provided with potable water supply (33.3%) is low. Since the tap connections considered to be functional were as per the JJM guidelines of including adequate quantity (55 lpcd or more), potability (as per BIS:10500 standards) and regularity of water supply (all days or as per the water supply schedule), the reason that a lower proportion of households had functional tap connections is mostly due to low proportions of taps being supplied with potable water. If the separate combinations of the functionality attributes are analyzed, it is seen that households having quantity and potability as per the JJM guidelines, as well as potability and regularity combinations are low (28.8% households having adequate quantity and potable water; 30.5% households having potable water received on a regular basis; while 78.1% households had adequate quantity of water supply on a regular basis).

The key water quality issues were Bacteriological presence (total coliform) in 27 percent of the water samples, TDS and pH in almost a fourth of the samples, and total hardness in a fifth of the samples. Moreover, 7–8 percent of the samples were found to have ammonia and turbidity beyond acceptable/ permissible limits.

The proportion of households reporting currently working tap connections is high (97.7%) in Karnataka. On a usual basis, almost three fourths of the households (73.4%) have reported receiving water supply on a daily basis, while the rest mostly have water supply 1–4 days per week. Almost all households (97%) have reported that water is supplied once a day and 93 percent of the households have reported that water supply timings are reliable. However, 95 percent of the households have reported that water supply is reliable as per the scheduled days of supply and 80 percent households reported adequate water pressure.

Almost all households (94.5%) have reported paying water tariff. As per the JJM guidelines, the State Government needs to ensure 100% fund requirement for operation and maintenance of the schemes are met by the Agency responsible for water supply provision to function as a utility.

Functional water and sanitation committees have been reported in less than a fourth of the villages, but wherever available, almost all have reported taking responsibility for operation and maintenance activities of the PWS schemes. As reported by the communities 'natural calamities, and poor availability of water at the source' were the main challenges faced by the schemes. About three-fourths of the schemes had taken some initiatives for source sustainability.

Annexures to this report includes:

- List of village with no scheme/defunct schemes/under construction is placed as Annexure 1,
- List of villages with schemes supplying only through tap stand/stand posts is placed as Annexure 2,

Functionality Assessment Survey 2020-21- Karnataka

- List of villages where 15 FHTCs were not found is placed as Annexure 3,
- Indicative proportion of functional tap connections by districts is placed as Annexure 4, and
- List of villages where samples failed for given quality parameter is placed as Annexure 5

Annexure 1: List of village with no scheme/defunct schemes/under construction

S.No	District Name	Block Name	Panchayat Name	Village Name	Name of Largest Scheme In The Village	Type	Status of The Scheme	Remarks
1.	Chikmagalur	Mudigere	Idukani	K.Kelaguru	Improvements on MWS scheme at Basthigadde	SVS	Under construction	Under construction
2.	Kolar	Mulbagal	Mothakapalli	Somasanahalli	Revival of MWS	SVS	Scheme is defunct	Somasananahalli - in this village there are 4 sources. All are not working for past 5 months

Annexure 2: List of villages with schemes supplying only through tap stand/stand posts

S.No.	District name	Block name	Panchayat name	Village name	Name of largest scheme in the village	Type	Remarks
1.	Bengaluru Urban	Bangalore South	Konappa na Agrahara	Dodda Nagamangala	Revival of PWS scheme	SVS	No FHTC. Water supply through tap stand only
2.	Chikballapur	Chikballapur	Kondena hally	Kadaseegenahally	Anganavadi school	SVS	No FHTC. Water supply through tap stand only
3.	Chikmagalur	Mudigere	Gonibee du	Kammaragodu	MWSS Kalgudde	SVS	14 public tap stands
4.	Dharwad	Kundgol	Kubhihal	Hanchinal	Providing water supply to HPS in Hanchinal village	SVS	7 public tap stands
5.	Hassan	Arsikere	Puralehalli	Maratagere	Multi village water supply scheme to 530 habitations in Banavara and Gandasi blocks of Arsikere taluk in Hassan district	MVS	18 public tap stands
6.	Haveri	Ranebennur	Kodiyala	Nalavagala	ST colony PWS revival at Nalavagala villege in Ranebennur taluk	SVS	In this village there no individual tap connection. There are 2 SVS schemes in the village, one is sponsored by Birla which is largely used for drinking purpose and the other scheme is sponsored by government under PWS but not used for drinking water purpose. As per local administration there are only stand posts available under both

Functionality Assessment Survey 2020-21- Karnataka

S.No.	District name	Block name	Panchayat name	Village name	Name of largest scheme in the village	Type	Remarks
							schemes
7.	Kolar	Kolar	Doddahalsala	Dimbachamanahalli	Anganwadi water supply	SVS	2 overhead tanks connected to 250 public tap connections supplying water to in this village. No individual tap connections.
8.	Kolar	Kolar	Vadagur	Kalahastipura	D F plant	SVS	No FHTC. Water supply through tap stand only
9.	Kolar	Mulbagal	Alangur	Bhatrahalli	MWSS	SVS	2 public tap stands
10.	Kolar	Srinivasapura	Arikunte	Neelatur	SC colony drilling of borewell associated with pipeline	SVS	No FHTC. Water supply through tap stand only
11.	Raichur	Sindhur	Salgunda	Salgunda	O and M of W S S TO Dhadesugur and other 17 villages MVS	MVS	No FHTC. Water supply through tap stand only
12.	Raichur	Sindhur	Yelekudligi	Yelekudligi	Preparation of PSR of all habitation in Raichur Taluka Kurkunda and other 45 villages	MVS	There is no individual house tap collection in this village. Water supply goes to the main tank to 6 mini stand posts and also to a separate RO facility for drinking water.
13.	Uttara Kannada	Mundgod	Naganuru	Chalgeri *	H.P.S.-chalgeri *	MVS	9 public taps for 8-10 households.

Annexure 3: List of villages where 15 FHTCs were not found
